

FLEXI

GLOBAL BIOMETRIC
CENTRE OF EXCELLENCE

The Evolution of Authentication

connective touch
secured and simplified™

Technical Feature	What it does	Benefits
Biometric locking unit (instant door security)	No need for keys, number pads or plastic cards	Replaces traditional locks with instant personal security Fingerprints don't get lost Fingerprints cannot be copied or borrowed Fingerprints don't forget digital codes No lost keys No need to replace lost keycards No need to worry about keys being copied or stolen No need to remember a digital code No loss of security if a digital code record is stolen
Biometric fingerprint sensor controlled door access	3D image from a 16 point capacitive device Less than 1 chance in 1,000,000,000 readings of an incorrect reading	Allows quick, secure and easy use by many different users e.g. within a high school Correct identification even if your finger is damaged by cuts or minor burns
LED light around sensor	Visual signal for correct identification	Successful registration easily seen by the user
Buzzer connected to sensor	Auditory signal for incorrect identification	User is immediately alerted by a sound to an incorrect identification
Protective sensor coating 'Smart' spindle	Secure sensor Keeps the sensor safe Separates mechanical lock from the handle the biometric sensor	Sensor protected from damage. Scratches to the surface will not change the working of the sensor The lock cannot be opened unless a correct identification is made Unauthorised people cannot 'force' the lock open by breaking off the handle
Mortise deadlocking night latch lock	Safety feature for emergencies	Robust mechanical lock which can be accessed in an emergency or if the battery in the unit fails
Robust outer casing	Steel case and lock passed PAS 24 testing for manual attack	Very difficult to break by determined people using aggressive physical attack Cannot be opened easily by a physical attack on the lock. Safe and secure design
Com.pad	Device to register individuals to encrypted devices (1-50) Enrols approved people through unique fingerprints	Quick and easy to add or delete an individual (within seconds). 5 people can be registered as administrators to control the entry and exit of individuals
Retrofit capability (in 15 minutes)	Can be fitted to the majority of internal doors, including fire doors Replaces insecure locking devices on majority of doors, including fire doors	Saves money, no need to fit new doors or locks Saves money - quick and easy to install No specialist equipment needed
Tried and tested software	Approved by Accredited UK to international security standards	Technology that is reliable and that you can trust
Made in Britain	Manufactured to ISO 9001 standards	Consistent, high quality is assured
Warranty	Covered for manufacturing defects for 1 year	Guarantee of good workmanship and efficacy
Efficient power supply	Uses 4 standard AA batteries	Easy to change batteries Low maintenance costs
Warning light	Beep Alerts you when batteries need changing	Ensures smooth, continuous operation
